3: Dir3:\*
1: Dir4:\* Database

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         RESULT 3
T09620
Probable lectin 2 precursor - alfalfa
C;Species: Medicago sativa (alfalfa)
C;Date: 16-Jul-1999 #sequence_revision 16-Jul-1999 #text_change 20-Jun-2000
C;Accession: T09620
R;Brill, L.M.; Pieternel, V.R.
submitted to the EMBL Data Library, March 1998
A;Description: Legume seed lectin genes: sequence of Mslec2 from Alfalfa, Alfalfa and SwAccession: T09620
A;Stetus: preliminary; translated from GB/EMBL/DDBJ
A;Molecule type: DNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ò

FUNCTION: Lysosomal Serine protease with tripeptidyl-peptidase I activity. May act as a non-specific lysosomal peptidase which activity. May act as a non-specific lysosomal peptidase which generates tripeptides from the breakdown products produced by lysosomal proteinases. Requires substrates with an unsubstituted N-terminus (By similarity)
-1. CATALYTIY: Release of an N-terminal tripeptide from a polypeptide, but also endopeptidase activity.
                                                                                                                                                                                                                                               SEQUENCE FROM N.A.

MISCELLANDOUS: The common laboratory strain of bacteriophage lambda, lambda PaPa; carries a frameshift mutation relative to Urlambda, the original isolate. The Urlambda virions have thin, jointed tail fibers (side tail fibers) that are absent from lambda wild type. Relative to lambda PaPa, Urlambda has expanded receptor specificity and adsorbs to E.coli cells more rapidly. SIMILARITY: BELONGS TO THE TAIL FIBER PAMILY.
CAUTION: THIS IS A CONCEPTUAL TRANSLATION, A FRAMESHIFT WAS

Gln+(Ser or Gly) for the enzyme from tobacco etch virus. The natural substrate is the viral polyprotein, but other proteins and oligopeptides containing the appropriate consensus sequence are

    {RNA}(N).
    CATALYTIC ACTIVITY: Hydrolyzes a Gly-|-Gly bond at its own Cterminus, commonly in the sequence -Tyr-Xaa-Val-Gly-|-Gly, in the processing of the potyviral polyprocein.
    PTM: VPG IS COVALENTLY LINKED TO THE GENOMIC RNA.
    PTM: THE VIRAL THA OF POTYVIRUSES IS EXPRESSED AS A SINGLE POLYPROTEIN WHICH UNDERGOES POSTTRANSLATIONAL PROTECLYTIC PROCESSING REGULTING IN THE PRODUCTION OF AT LEAST EIGHT INDIVIDUAL PROTEINS.
    SIMILARITY: HC PROTEINASE BELONGS TO PEPTIDASE FAMILY C6.
    SIMILARITY: BELONGS TO THE POTYVIRUSES POLYPROTEIN FAMILY.
    SIMILARITY: BELONGS TO THE POTYVIRUSES POLYPROTEIN FAMILY.

                                                                                                                    the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Hydrolase, Transferase, Thiol protease, RNA-directed RNA polymerase,
Coat protein, Polyprotein, Covalent protein-RNA linkage, Helicase,

The minimal gene complement of Mycoplasma genitalium.";

Science 270:397-403 (1995).

-I- FUNCTION: THE RUVA-RUVB COMPLEX IN THE PRESENCE OF ATP RENATURES

CRUCIFORM STRUCTURE IN SUPERCOILED DNA WITH PALINDROMIC SEQUENCE,

HOWOLOGOUS RECOMBINATION. RUVAB IS AN HELICASE THAT MEDIATES THE

HOLLIDAY JUNCTION MIGRATION. BY LOCALIZED DENATURATION AND

REANNBLING (BY SIMILARITY).

C. I- SUBUNIT: FORMS A COMPLEX WITH RUVA.
HYDROXYMETHYLBILANE PREUROPORPHYRINOGEN IN SEVERAL DISCRETE STEPS.

ANALAYTIC ACTIVITY: 4 porphobilinogen + H(2)0 =

hydroxymethylbilane + 4 NH(3).

COFACTOR: COVALENTLY BINDS A DIPYRROMETHANE COFACTOR TO WHICH THE

PORPHOPILINOGEN SUBUNITS ARE ADDED (BY SIMILARITY).

PATHWAY: PORPHYIN biosynthesis by the C5 pathway; fourth step.

SIMILARITY: BELONGS TO THE HMBS FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Fucies Acids Res. 24:4420-4449(1996).

-!- FUNCTION: THE RUYA-RUYB COMPLEX IN THE PRESENCE OF ATP RENATURES CRUCIFORM STRUCTURE IN SUPERCOLLED DNA WITH PALINDROMIC SEQUENCE, INDICATING THAT IT MAY PROMOTE STRAND EXCHANGE REACTIONS IN HOMOLOGOUS RECOMBINATION. RUVAB IS AN HELICASE THAT MEDIATES THE HOLLIDAY UNKTION MIGRATION BY LOCALIZED DENATURATION AND REANNELING (BY SIMILARITY).

-!- SUBBUNT: FORMS A COMPLEX WITH RUVA.

-!- SIMILARITY: BELONGS TO THE RUVB PAMILY.

Submitted (AFR-2001) to the EMBL/GenBank/DDBJ databases.
-1- CATALYTIC ACTIVITY: ATP + glycine + tRNA(Gly) = AMP + diphosphate
                                                                                                                                                                                                                            + glycyl-tRNA(Gly).
-- SUBUNIT: Homodimer (By similarity).
-- SUBCELLULAR LOCATION: Cycoplasmic.
-- SIMILARITY: Belongs to class-II aminoacyl-tRNA synthetase family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                463 AA; 52937 MW; E8BDCE20B65538F7 CRC64;

Where complete sequence of the Pyrococcus furiosus genome.";
Submitted (EBE-2002) to the EMBL/GenBank/DDBJ databases.
-!- FUNCTION: Catalyzes amidations at positions B. D. E, and G on adenosylcobyrinic A,C-diamide. NH(2) groups are provided by glundamine, and one molecule of ATP is hydrogenolyzed for each amidation (By similarity).
-!- PATHWAY: Cobalamin biosynthesis.
-!- SIMILARITY: BELONGS TO THE COBB/COBQ FAMILY. COBQ SUBFAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Thermotoga maritima.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Chiamydia trachomatis.";
Science 282:754-759(1998).
-!-CATALYITC ACTIVITY: ATP + L-lysine + tRNA(Lys) = AMP + diphosphate + L-lysyl-tRNA(Lys).
-!-COFACTOR: Binds 3 magnesium ions per subunit (By similarity).
-!-SUBUNIT: Homodimer (By similarity).
-!-SUBCLEULAR LOCATION: Cytoplasmic.
-!-SUMILARITY: Belongs to class-II aminoacyl-tRNA synthetase family.

                                                                                                                                                                                                                                                                                                                                                                     nature 399:323-323(1593).
-!- CATALYTIC ACTIVITY: L-arabinose = L-ribulose.
-!- PATHWAY: L-arabinose catabolism; first step.
-!- SIMILARITY: Belongs to the arabinose isomerase family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Score 26; DB 1; Length 496;

-I- FUNCTION: DNA-dependent RNA polymerase catalyzes the transcription of DNA into RNA using the four ribonucleoside triphosphates as substrates (By similarity).

C. I- CAPPLAYTIC ACTIVITY: N nucleoside triphosphate = N diphosphate +
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     This SWISS-PROT entry is copyright. -!- SUBUNIT: RNA polymerase III consists of about 15 different
subunits. This subunit is the second largest component of RNA
polymerase III (By similarity).
-!- SUBCELLULAR LOCATION: Nuclear (By similarity).
-!- SIMILARITY: Belongs to the RNA polymerase beta chain family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          EMBL; AK039366; BAC30327.1; -.

C CATALYTIC ACTIVITY: ATP + L-phenylalanine + tRNA(Phe) = AMP +

Genome Res. 12:689-700(2002).

C CATALYTIC ACTIVITY: ATP + L-phenylalanine + tRNA(Phe) = AMP +

Genome Res. 12:689-700(2002).

C CATALYTIC Selection of two alpha and two beta chains (By similarity).

C C SUBMILARITY: Belongs to the phenylalanyl-tRNA synthetase beta chain family. Subfamily 1.

C C SIMILARITY: Contains 1 tRNA-binding domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                           This SWISS-PROT entry is copyright.
